

Tax Year Range Fix

Frontend change report - remove 2020 and 2021

1. Overview

This change restricts tax year selection across the frontend to 2022 through 2026. Years 2020 and 2021 were removed from the centralized type definition and all dependent UI components. The fix was applied with minimal scope: frontend only, no backend, API, database, or server-side logic changes.

2. Year Range

Before

```
TaxYear = 2020 | 2021 | 2022 | 2023 | 2024 | 2025 | 2026
ALL_TAX_YEARS = [2020, 2021, 2022, 2023, 2024, 2025, 2026]
```

After

```
TaxYear = 2022 | 2023 | 2024 | 2025 | 2026
ALL_TAX_YEARS = [2022, 2023, 2024, 2025, 2026]
SELECTABLE_TAX_YEARS = [2022, 2023, 2024, 2025, 2026] (new constant)
```

3. Files Modified (10 source files)

- frontend/src/types/crm.ts - Central definition - primary fix
- frontend/src/components/MultiYearSelect.tsx - Year dropdown, buttons, chips
- frontend/src/components/pipeline/AddLeadDialog.tsx - Add lead year selector
- frontend/src/components/pipeline/EditClientDialog.tsx - Edit client year selector
- frontend/src/components/profile/AddEngagementDialog.tsx - Add engagement years
- frontend/src/pages/CalculatorPage.tsx - Calculator year label logic
- frontend/src/pages/ProfilePage.tsx - Tax history panel years & layout
- frontend/src/store/calculatorStore.ts - Select-all tax years action
- frontend/src/utils/calculationContext.ts - Doc comment update
- frontend/src/utils/calculationContext.test.ts - Unit test data update

Note: frontend/package-lock.json also shows local dependency version drift (unrelated to this feature). It was not part of the year-range fix.

4. Detailed Changes by File

frontend/src/types/crm.ts

Centralized type and constants. All components importing these inherit the new range.

- Removed 2020 and 2021 from TaxYear union type.
- Removed 2020 and 2021 from ALL_TAX_YEARS array.
- Added SELECTABLE_TAX_YEARS constant: [2022, 2023, 2024, 2025, 2026].
- Updated JSDoc example from "2021" to "2022" in LeadData.calculations.

frontend/src/components/MultiYearSelect.tsx

Shared multi-select popover and inline year button components.

- Import changed from ALL_TAX_YEARS to SELECTABLE_TAX_YEARS.
- allSelected check now uses SELECTABLE_TAX_YEARS.every(...).
- Label updated: "All Years (2020-2026)" -> "All Years (2022-2026)".
- Popover grid layout: grid-cols-2 -> grid-cols-3 (5 years, balanced 3+2).
- YearButtons default years prop: SELECTABLE_TAX_YEARS.
- YearChips "All Years" badge uses SELECTABLE_TAX_YEARS.length.

frontend/src/components/pipeline/AddLeadDialog.tsx

Add New Lead modal - engagement year multi-select.

- Import: ALL_TAX_YEARS replaced with SELECTABLE_TAX_YEARS.
- onSelectAll handler: setYears([...SELECTABLE_TAX_YEARS]).

frontend/src/components/pipeline/EditClientDialog.tsx

Edit Client modal - tax year multi-select.

- Import: ALL_TAX_YEARS replaced with SELECTABLE_TAX_YEARS.
- onSelectAll handler: taxYears: [...SELECTABLE_TAX_YEARS].

frontend/src/components/profile/AddEngagementDialog.tsx

Add Engagement modal - year selection and billing amounts.

- Import: ALL_TAX_YEARS replaced with SELECTABLE_TAX_YEARS.
- onSelectAll sets years and amounts from SELECTABLE_TAX_YEARS only.

frontend/src/pages/CalculatorPage.tsx

Calculator client information section.

- Added SELECTABLE_TAX_YEARS import.
- yearsLabel "All Tax Years" check: length === 7 -> length === SELECTABLE_TAX_YEARS.length.

frontend/src/pages/ProfilePage.tsx

R&D Tax Credit History panel (TaxHistoryPanel).

- Added SELECTABLE_TAX_YEARS import.
- Replaced rolling 7 calendar years (currentYear - i) with SELECTABLE_TAX_YEARS + legacyYears.
- legacyYears: years in ALL_TAX_YEARS outside SELECTABLE with saved status or engagement.
- Year cards grid: grid-cols-4 sm:grid-cols-7 -> grid-cols-3 sm:grid-cols-5.

frontend/src/store/calculatorStore.ts

Zustand calculator store.

- Added SELECTABLE_TAX_YEARS import.
- selectAllTaxYears action: uses SELECTABLE_TAX_YEARS instead of ALL_TAX_YEARS.
- Year validation filter (line 169) still uses ALL_TAX_YEARS - inherits updated range.

frontend/src/utis/calculationContext.ts

Helper to derive tax years from lead calculation keys.

- Doc comment example updated: "2021" -> "2022".
- Validation filter uses ALL_TAX_YEARS - inherits updated range automatically.

frontend/src/utis/calculationContext.test.ts

Unit tests for calculation context helpers.

- Test fixture calculations key: "2021" -> "2022".
- Expected result: [2021, 2024] -> [2022, 2024].

5. Files That Inherit (no direct edits)

These files reference ALL_TAX_YEARS or TaxYear and automatically use the new 2022-2026 range after the crm.ts update:

- frontend/src/services/leads.ts - TAX_YEARS validation set
- frontend/src/store/calculatorStore.ts - calculation year filter
- frontend/src/pages/ProfilePage.tsx - engaged-year calculation sync loop
- Pipeline, Documents, Calculator, and Review pages using YearChips / TaxYear types

6. UI Layout Adjustments

Removing two years (7 -> 5) required minor layout tweaks so horizontal year controls remain visually balanced:

- MultiYearSelect popover: 2-column grid -> 3-column grid (3+2 layout for 5 years).
- ProfilePage tax history cards: sm:grid-cols-7 -> sm:grid-cols-5.
- YearButtons (inline): flex-wrap unchanged - buttons reflow naturally.

No color, typography, or broader styling changes were made.

7. Out of Scope (unchanged)

- Backend code, APIs, database schemas
- Server-side calculations and business logic
- Seed/mock data in documentsStore and engagementsStore (already 2022+)
- ESLint ecmaVersion: 2020 (JavaScript language version, not a tax year)

8. Expected Behavior

- Users can only select 2022, 2023, 2024, 2025, or 2026 in any year selector.
- No dropdown, filter, chip, tab, or button group displays 2020 or 2021.
- "Select all years" selects exactly the five allowed years.
- Backend remains fully compatible; existing API contracts unchanged.

9. Git Status

Branch: penelope. Changes are local and unstaged. No commit or push was performed as part of this task.
